

“Software Center”

If one morning you sit down at your computer and there is a message that you need a software update, you can go to the software center to do the install and get things rolling again.

- 1) For Windows 8.1 operating system, please tap your "start key" the one that looks like a window on the bottom left part of your keyboard. 

- 2) Once you are in that screen with the tiles, please type the words "software center".

- 3) When this menu item appears in the top left corner of the screen, click on it.

“Software Center” opens (See screen shot below)

- 4) Find the update you need such as JAVA update and at the bottom right of the screen click install.

This will probably force quit your internet browser but you can just re launch. That’s it!
